

Emon Shil

+8801935570856 | emonshil.htuc@gmail.com | [LinkedIn](#) | [Portfolio](#)

Passionate DevOps engineer with 2+ years of professional experience. As a DevOps engineer with hands-on experience supporting, automating and optimizing mission critical deployments in production server & cloud. Building, Deploying, Source code management, configuration management, CI/CD and DevOps process. Highly motivated to contribute to a team-oriented DevOps culture.

EXPERIENCE

DevOps Engineer Intern

Apr. 2026 – Present

[Spectrum Software & Consulting Ltd. \(SSCL\)](#) | *onsite*

- Set up and configured Prometheus and Grafana monitoring systems to track infrastructure health, resource utilization, and application performance metrics in real time.
- Implemented and updated production-grade CI/CD pipelines using Jenkins and GitHub Actions, ensuring reliable automated build, test, and deployment workflows.
- Worked extensively with Docker and Docker Compose to containerize applications and manage multi-service environments across development and production stages.
- Collaborated with the engineering team on cloud-native deployments, supporting scalable and fault-tolerant application delivery for fintech products (SpectraTrade, InfraSight, DocumentAI).
- Assisted in configuration management and infrastructure automation, contributing to improved system reliability and reduced manual operational overhead.

DevOps Engineer

Oct. 2022 – Sep. 2024

[Cikatech Inc.](#) | *remote*

- Designed and implemented a highly available and scalable infrastructure on AWS, utilizing EC2, S3, RDS, VPC.
- Automated continuous integration and deployments using Jenkins and GitHub Actions.
- Worked on Docker container to create docker images for different environments.
- Installed, configured and managed monitoring tools such as New Relic, Prometheus with Grafana for resource/network monitoring.
- Incorporated the Code Quality Tools SonarQube, Findbugs and Trivy into Node.js Projects.
- Experience with configuration management using Ansible.
- Performed penetration tests and security assessments on infrastructure and applications to find security flows.

PROJECTS

Cikaslot | *Implemented Three Tier Architecture on AWS*

- Architected and deployed a scalable three-tier architecture with web application and database layers on AWS, utilizing services like EC2, RDS and VPC for optimal performance and security.
- Configured auto-scaling and load balancing to handle high traffic applications, reducing downtime and improving availability.

Wanderlust | *Kubernetes-Powered DevOps Deployment*

- Deployed a 3-tier travel platform on a self-managed Kubernetes (kubeadm, Kind) cluster, demonstrating full-scale DevOps automation.
- Built and optimized multi-stage Dockerfiles for frontend and backend, and pushed images to Docker Hub for deployment.
- Configured a Kubernetes cluster (1 master + multiple worker nodes) to pull images directly from Docker Hub and run distributed workloads.
- Deployed microservices using YAML manifests including Deployment, Service, PersistentVolume, and PersistentVolumeClaim ensuring scalability and high availability.
- Automated the entire build, test, and deployment process using GitHub Actions, with Slack integration for real-time notifications.
- Used Kubernetes Secrets to secure environment variables and Persistent Volumes for database persistence.

Netflix Clone | *Production-Grade DevOps, GitOps & Kubernetes Deployment*

- Designed and implemented a production-grade DevOps pipeline using CI/CD, GitOps, and Kubernetes orchestration.
- Containerized the application with Docker and automated build and deployment using a Jenkins-based CI/CD pipeline integrated with GitHub.
- Deployed the application on a Kubernetes cluster with node groups, ensuring scalability, high availability, and workload isolation.
- Managed deployments using Helm charts for version-controlled releases and smooth rollouts.
- Implemented GitOps with ArgoCD, enabling automated sync, self-healing, and drift detection from GitHub.
- Integrated Prometheus and Node Exporter for cluster and node-level monitoring, with Grafana dashboards for observability.

- Secured CI/CD workflows and Kubernetes access, and exposed the application via NodePort with proper security group configuration.

QuickBite | *Production-Grade DevOps Architecture on AWS EKS*

- Designed and deployed a cloud-native food ordering platform on Amazon EKS implementing a complete CI/CD + GitOps workflow built for production-grade scalability and observability.
- Automated CI pipeline with secure Docker builds, multi-stage Dockerfiles, and integrated vulnerability scanning to ensure image integrity prior to deployment.
- Implemented GitOps-based deployment using Helm and ArgoCD with auto-sync for staging and controlled releases for production, achieving zero configuration drift.
- Architected a multi-environment Kubernetes setup with Horizontal Pod Autoscaler (HPA) and StatefulSets for high availability and elastic scalability.
- Configured NGINX Ingress with AWS Network Load Balancer (NLB) for scalable, low-latency traffic routing across microservices.
- Built a full observability stack with Prometheus, Grafana, and Alertmanager for proactive monitoring, dashboarding, and incident alerting.

TECHNICAL SKILLS

Cloud Technologies: AWS, Microsoft Azure

CI/CD Tools: Jenkins, GitHub Actions, GitLab

Containerization Tools: Docker, Kubernetes

Web Server: Nginx, Apache

Version Control: Git, Bitbucket, GitLab

Configuration Management Tools: Ansible, Terraform

Code Quality and Security Tools: SonarQube, Trivy, FindBugs, OWASP Dependency Check, Fail2ban

Database: MySQL, MongoDB

Logging and Monitoring Tools: Prometheus, Grafana, New Relic, Nginx Amplify, Betterstack

EDUCATION

American International University Bangladesh

Bachelor of Science in Computer Science & Engineering

Dhaka, Bangladesh

Nov 2021 – Dec 2025
